Setting up authentication using one-time passwords (OTP) in the UIS

Personal administration

- **Log in to the Personal administration of UIS** • First log in to UIS instructions • System integrators

1. Log in to UIS.

Information system set-up

- **Password change**
- **Setting of authentication using one-time passwords (OTP)**
- Security data for password restoration
- Change identity
- My operations

2. In the **Information System set-up** section, select **Setting of authentication using one-time passwords (OTP)**.

SETTING OF AUTHENTICATION USING ONE-TIME PASSWORDS (OTP)

On this page you can set two-factor authentication using one-time passwords (OTP). Before you start using the login, you need to set your mobile phone. First download the application for generating one-time passwords, e.g. Google Authenticator or Authy.

Find the applications in Google Play and in App Store.

- Android - Google Authenticator
- Android - Twilio Authy
- Android - Microsoft Authenticator
- iOS - Google Authenticator
- iOS - Twilio Authy
- iOS - Microsoft Authenticator

1. Proceed with the settings.

As soon as you have installed one of the applications in your mobile device, click on the button below to go to Initiate setting.

I have installed application, I want to initiate setting

New QR code was generated for you. If you have an entry from UIS MENDELU in your mobile application, remove this entry before scanning QR code.

2. A QR code will appear on the page.

I am unable to scan QR code

Complete pairing with mobile device

To complete pairing, enter the two consecutive codes displayed by the application in the boxes **First code** and **Second code**. Click on the **Complete pairing** button to complete the pairing (saving in UIS). Click on the **Complete and activate login** button to complete pairing and to activate login using one-time passwords.

First code

Second code

Complete pairing

Complete and activate login

Find the applications in Google Play and in App Store.

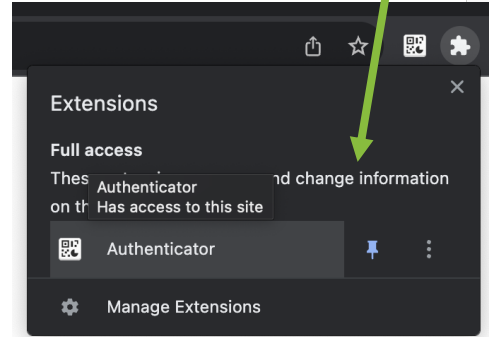

- Android - Google Authenticator
- Android - Twilio Authy
- Android - Microsoft Authenticator
- iOS - Google Authenticator
- iOS - Twilio Authy
- iOS - Microsoft Authenticator

Below see the unique QR code valid while you view this page. Scan the QR code using the application in your mobile. Later a new entry will be added to your application - UIS MENDELU account. Every 30 seconds new code will be generated and added there.

New QR code was generated for you. If you have an entry from UIS MENDELU in your application, remove this entry before scanning QR code.

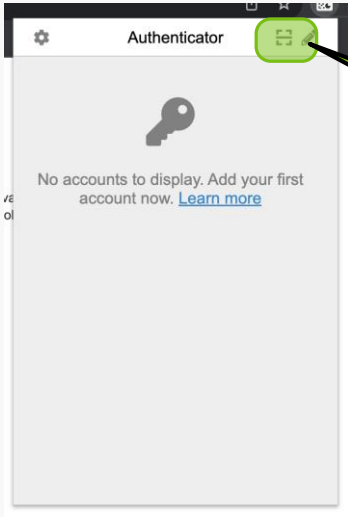

On the toolbar, directly select the Authenticator icon or choose the icon for all resolutions.

2. Paste the codes into the form.

Complete pairing

Complete and activate login

To complete pairing, enter the two consecutive codes displayed by the application in the boxes **First code** and **Second code**. Click on the **Complete pairing** button to complete the pairing (saving in UIS). Click on the **Complete and activate login** button to complete pairing and to activate login using one-time passwords.

First code

Second code

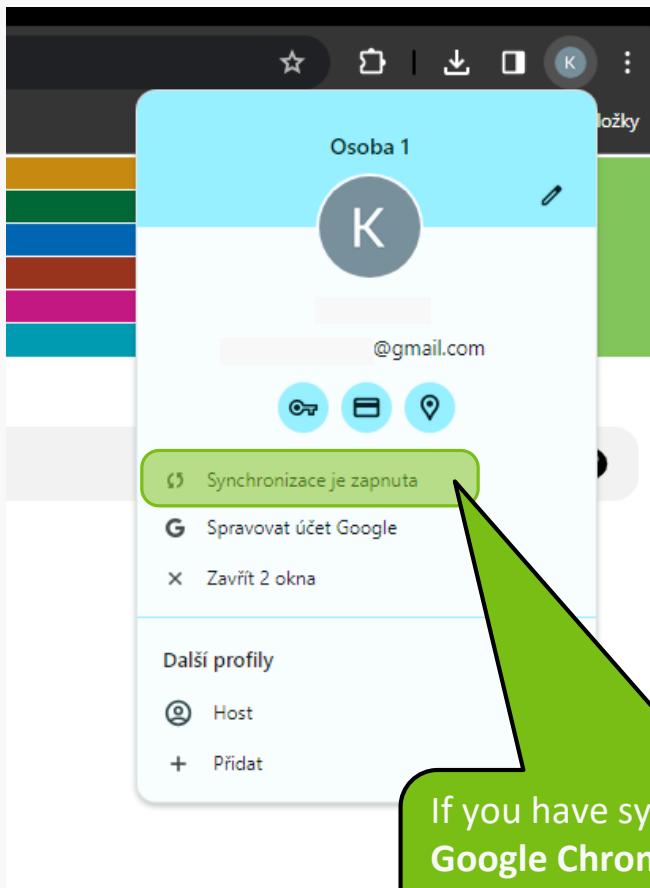

1. After completing, choose "Finish and activate login."

SETTING OF AUTHENTICATION USING ONE-TIME PASSWORDS (OTP)

 Login using one-time password (OTP) was successfully activated.

2. In UIS, you will see a success message.

Additional information

If you have synchronisation enabled in **Google Chrome**, this means you'll be able to connect on another computer using that account.
